7. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **alugueldebetoneirarj.com.br** for a **Local Construction Equipment Rental Service** site, generated on June 30, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

70/100

SEO HEALTH SCORE

77/100

LIGHTHOUSE PERFORMANCE

88/100

LIGHTHOUSE SEO

Critical Issues Found:

1. **Critical:** Broken 'Quem Somos' navigation link returns 404
2. **Critical:** Severe content cannibalization on price-related blog posts
3. **Critical:** Blog post promises 250L service that does not exist
4. **Critical:** Inconsistent 400L technical specs across pages (2 CV vs 3 CV, 480 kg vs 520 kg)
5. **High:** Missing meta descriptions on homepage and service pages

Quick Wins:

1. Fix broken /quem-somos/ redirect and internal links
2. Add unique meta descriptions to all indexable pages
3. Force 301 redirect for trailing-slash URLs
4. Fix breadcrumb schema URLs to use trailing slash
5. Create /llms.txt for AI crawler guidance

2. Audit Categories

2.1 Technical SEO

Score: **87/100**

What Works

- HTTPS/HSTS active with valid Let's Encrypt certificate
- Canonical non-www to www redirect (308) configured
- robots.txt allows all crawlers and references sitemap
- XML sitemap contains 17 valid, indexable URLs
- Canonical tags and meta robots are consistent across pages
- Schema JSON-LD present and syntactically valid

Findings

Trailing-slash URLs return 200 instead of 301 **High**

URL /servicos/betoneira-1201 (without slash) returns 200, creating a duplicate indexable version.

Recommendation: Configure server to 301-redirect all slashless URLs to the trailing-slash canonical version.

Breadcrumb schema uses inconsistent URLs **Medium**

BreadcrumbList item 'Servicos' points to /servicos (no slash) while the real page is /servicos/.

Recommendation: Update all breadcrumb item URLs to match canonical trailing-slash URLs.

Missing security headers **Low**

Content-Security-Policy and X-Frame-Options are not present.

Recommendation: Add CSP and X-Frame-Options headers for additional security.

2.2 Content Quality & E-E-A-T

Score: **58/100**

What Works

- Service pages include technical specification tables

- Calculator tool provides utility value to users
- Privacy policy and terms pages exist
- Blog covers commercial intent topics (price, location, monthly rental)

Findings

Inconsistent technical specifications for 400L model **Critical**

Service page lists 3 CV / 480 kg while blog posts list 2 CV / 520 kg for the same 400L mixer.

Recommendation: Create a single source of truth for specs and update all pages accordingly.

About page uses generic unverifiable team names **High**

Names like 'Joao Silva', 'Ana Paula Costa', 'Marcos Rocha' appear without photos, LinkedIn, or professional registrations.

Recommendation: Replace with real team profiles including photos, roles, tenure, and CREA/registrations where applicable.

Blog posts lack real author bylines **High**

Author is generic brand name or absent; reduces authority signals.

Recommendation: Assign real authors and add Person schema.

Testimonials lack verification attributes **High**

No photos, cities, dates, or links to verify the three homepage testimonials.

Recommendation: Use real customer reviews from Google Business or Reclame Aqui and mark them up with Review schema.

Year inconsistency in pricing article **Medium**

Title/H1 mentions '2026' but an H2 inside the article says '2024'.

Recommendation: Review and update all dates to the current year.

2.3 On-Page SEO

Score: **65/100**

What Works

- H1s and titles clearly mention target keywords and location
- WhatsApp CTAs are prominent with pre-filled messages
- Service pages have unique capacity-based targeting

Findings

Meta descriptions missing on most pages **High**

Homepage and service pages do not contain a meta description tag.

Recommendation: Write unique, CTR-optimized meta descriptions for every indexable page.

CTA 'Solicitar Orcamento' leads to different destinations **High**

Menu points to WhatsApp; service pages point to /contato/.

Recommendation: Standardize labels: 'Falar no WhatsApp' for wa.me; 'Preencher Formulário' for /contato/.

Service pages have no inline quote form **Medium**

Conversion depends solely on WhatsApp/phone, excluding form-preferring leads.

Recommendation: Add a short quote form at the bottom of each service page with equipment pre-selected.

2.4 Schema / Structured Data

Score: **72/100**

What Works

- LocalBusiness, Organization, WebSite, BreadcrumbList present
- Service, Article, FAQPage, WebApplication schemas used on relevant pages
- All JSON-LD blocks parsed successfully

Findings

Service schema missing offers/pricing **High**

Service pages include provider and description but no offers/priceCurrency/availability.

Recommendation: Add Offer blocks with BRL pricing and availability to each service page.

SearchAction points to non-existent internal search **Medium**

WebSite potentialAction uses /blog/?q={search_term_string} but the blog has no search results page.

Recommendation: Remove SearchAction or build a real search results page.

FAQ section on homepage lacks FAQPage markup **Medium**

Visible FAQ content is not marked as FAQPage, reducing LLM/AI citability.

Recommendation: Add FAQPage JSON-LD to the homepage FAQ section.

Organization sameAs only lists Instagram **Low**

Limited external entity signals.

Recommendation: Add Google Business Profile, Facebook, LinkedIn, and industry associations.

2.5 Core Web Vitals & Performance

Score: **74/100**

What Works

- TTFB ~60 ms (excellent)
- CLS near 0 (excellent)
- TBT 0 ms and low main-thread interference
- Brotli compression and long-term cache headers active

Findings

Render-blocking resources delay LCP **High**

Google Fonts CSS and Astro CSS block rendering, causing ~1.4-1.6 s element render delay.

Recommendation: Load Google Fonts asynchronously; inline critical CSS and defer non-critical styles.

Hero image is intentionally blurred and low quality **High**

LCP element is a blurred JPEG placeholder, hurting perceived quality.

Recommendation: Replace with a sharp, optimized WebP/AVIF photo of a real mixer on a job site.

Images served as JPEG instead of modern formats **Medium**

Hero and team photos are JPEG; WebP/AVIF would reduce size.

Recommendation: Use Astro Picture component with WebP/AVIF fallback.

2.6 Local SEO

Score: **58/100**

What Works

- NAP consistent across schema and contact page
- Service area mentions multiple cities and neighborhoods
- WhatsApp/phone CTAs are strong and pre-filled
- LocalBusiness schema includes hours, address, and phone

Findings

No Google Business Profile detected **Critical**

No GBP result found for brand, phone, or address; business is invisible in Local Pack.

Recommendation: Create/claim a Google Business Profile with identical NAP and category 'Equipment Rental Agency' / 'Construction Equipment Supplier'.

No dedicated city/borough landing pages **High**

Competitors rank with /locacao-de-betoneira-cidade/ pages; this site only has generic blog mentions.

Recommendation: Create location landing pages for Niteroi, Sao Goncalo, Nova Iguaçu, Duque de Caxias, etc.

No external reviews or citations **High**

No Google reviews, Reclame Aqui, or local directory listings found.

Recommendation: Register on local directories and implement a review request workflow.

Address not visible in footer HTML **Medium**

Address only appears in schema and /contato/ page.

Recommendation: Display full NAP in the footer of every page.

2.7 AI Search Readiness (GEO)

Score: **72/100**

What Works

- robots.txt allows all major AI crawlers
- Structured data helps LLM extraction
- NAP and service information are consistent
- FAQ content exists (though not all marked up)

Findings

llms.txt file missing High

No /llms.txt guide for AI crawlers.

Recommendation: Create /llms.txt with business identity, services, service area, FAQs, and policies.

No external citations or references High

Content does not cite norms (NR-18, ABNT) or industry associations, weakening E-E-A-T for LLMs.

Recommendation: Add authoritative references and links in educational blog posts.

Instagram profile name appears inconsistent Medium

sameAs points to @alugueldebetoneira but profile title observed as 'Elevando'.

Recommendation: Verify Instagram account ownership and update sameAs if needed.

2.8 Content Architecture / Clustering

Score: **37/100**

What Works

- Blog exists and covers commercial topics
- Service pages linked from homepage

Findings

No clear pillar page or hub-and-spoke structure High

Blog is a flat chronological list; no central guide connects related topics.

Recommendation: Create a pillar page (e.g., /blog/guia-de-aluguel-de-betoneira/) and reorganize posts as spokes.

Severe cannibalization on price queries **Critical**

Multiple posts target 'quanto custa alugar betoneira' with overlapping H1/H2 keywords.

Recommendation: Consolidate into one authoritative pricing guide and redirect/rewrite the others.

No top-of-funnel educational content **High**

All 5 blog posts are commercial; missing how-to, safety, and calculation guides.

Recommendation: Publish guides on how to use a mixer, calculate concrete volume, and NR-18 safety.

2.9 Visual / Mobile UX

Score: **64/100**

What Works

- Site is responsive and uses large typography
- Contact form is mobile-friendly
- No intrusive interstitials or popups

Findings

Hero H1 too large on mobile **High**

text-6xl H1 pushes trust badges and secondary CTA below the fold.

Recommendation: Reduce H1 to text-4xl/text-5xl on mobile and ensure CTA/badge visibility above the fold.

Primary and WhatsApp colors fail WCAG contrast **High**

#E8A838 on white = 2.08:1; white on #25D366 = 1.98:1.

Recommendation: Darken primary/CTA colors or increase font weight/size to meet WCAG AA.

Tap targets below 44 px **Medium**

Hamburger, footer links, and social icons are smaller than recommended.

Recommendation: Increase padding and min-height to at least 44 px for all interactive elements.

3. Core Web Vitals & Performance

77/100

3.1 Lighthouse Scores

Figure 1: Lighthouse audit scores across Performance, Accessibility, Best Practices, and SEO.

Category	Score	Rating
Performance	77	Needs Work
Accessibility	85	Needs Work
Best Practices	92	Good
SEO	88	Needs Work

3.2 Lab Metrics (Simulated)

Metric	Value	Score	Threshold
First Contentful Paint (FCP)	2.0 s	72%	≤ 1.8s
Largest Contentful Paint (LCP)	2.0 s	80%	≤ 2.5s
Total Blocking Time (TBT)	0 ms	100%	≤ 200ms
Cumulative Layout Shift (CLS)	0.008	99%	≤ 0.1
Speed Index	2.7 s	65%	≤ 3.4s
Time to Interactive (TTI)	2.0 s	82%	≤ 3.8s

3.3 CrUX Field Data

CrUX Field Data: CrUX field data not available for this origin in this session (PageSpeed API quota exceeded; no GSC/GA credentials).

3.4 Failed / Warning Audits (2)

Audit	Score	Details
Render-blocking resources	35%	Google Fonts CSS and Astro CSS block first paint
Reduce unused CSS	46%	13 KB of unused CSS rules on desktop

SEO Audit Issues (1)

Document does not have a meta description

Optimization Opportunities (3)

Opportunity	Estimated Savings
Eliminate render-blocking resources	950ms

Opportunity	Estimated Savings
Reduce unused CSS	160ms
Serve images in next-gen formats	120ms

4. Search Console Performance

Search Analytics data has a 2-3 day lag. Data available for ~16 months.

5. Indexation Status

URL Inspection API: 2,000 inspections/day per property.

6. Action Plan

Phase 1 - Critical Fixes (0-7 days) 0-7 days

- Fix broken /quem-somos/ link and add 301 redirect to /sobre/
- Add unique meta descriptions to home, services, blog, about, contact, calculator
- Force 301 redirect for all non-trailing-slash URLs
- Fix breadcrumb schema URLs to use trailing slash
- Standardize CTA labels and destinations
- Create and publish /llms.txt
- Replace hero blurred image with sharp, optimized hero photo

Phase 2 - Content Architecture (1-2 weeks) 1-2 weeks

- Create pillar page /blog/guia-de-aluguel-de-betoneira/
- Resolve price-post cannibalization by consolidating or differentiating
- Decide on 250L service: create page or remove from post and redirect
- Standardize 400L technical specs across all pages
- Publish 4-6 top-of-funnel educational posts

Phase 3 - E-E-A-T & Local (2-4 weeks) 2-4 weeks

- Create/claim Google Business Profile and add hasMap embed
- Replace generic team/testimonials with real verified profiles and reviews
- Add real author bylines and Person schema to blog posts
- Build location landing pages for major cities and boroughs
- Register on local directories and start review acquisition

Phase 4 - Performance & Schema (2-4 weeks) 2-4 weeks

- Load Google Fonts asynchronously and inline critical CSS
- Migrate images to WebP/AVIF with fallback
- Add Offer/price schema to all service pages
- Fix or remove non-functional SearchAction
- Add FAQPage markup to homepage FAQ

- Improve mobile contrast and tap targets

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO — Google SEO Intelligence Skill — June 30, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
